The Andean dialect of the Lengua Hispana (LH) is a variant of the Spanish language spoken in Latin America. This variant of Spanish uses many of the morpho-syntactic and semantic differences associated with the different dialects that have been spoken in Latin America, due to the multiple languages that these areas once shared with the rest of Spain, most importantly, the Quechua language, which has been spoken for almost 300 years in the countries in the Andean region. The variants of the Spanish spoken in Latin America share a number of characteristics; among these is the Andean dialect of Spanish, which has a wide range of linguistic characteristics, of which the most widely studied is the addition of Quechua words to the Spanish lexicon (in this case, the substitution of the "C" and "K" consonants with their Quechua counterparts). This article will focus on the phonological, morphological, syntactic and lexico-semantic aspects of the Andean dialect of Spanish, as a source of inspiration and support for those who are interested in creating new tools for studying this variant of the Spanish language. The Andean variant of the Spanish language is the only Spanish dialect that has been deemed as a "significant heritage" of the Spanish language and that is considered the most compatible with the rest of Spain's dialects, as opposed to the "standard" variety of Spanish (the one used in Spain today), which is considered to be the most prestigious of the Spanish dialects (Gentner and Greimas, 1992). As such, it is also the most studied Spanish variety in terms of linguistic and sociolinguistic research. 82157476af
